Search Notes

Dear Examiner Chen,

Attached are the search results (from commercial databases) for your case. As discussed, due to the 3-hr. F&F time limitation, patent files were not searched.

Color tags mark the articles which appear to be most relevant to the case. Pls review all documents, since untagged items might also be of interest. If you wish to order the complete text of any document, pls submit request(s) directly to the EIC2100 Reference Staff located in PK2-4B40.

Pls call if you have any questions or suggestions for additional terminology, or a different approach to searching the case. Finally, pls complete the attached Search Results Feedback Form, as the EIC/STIC is continually soliciting examiners' opinion of the search service.

Thanks,
Carol

Search Request Form

Today's Date:

7/19/04

What date would you like to use to limit the search?

Priority Date: 10/6/00

Other:

Name Chongshan Chen

AU 2172 Examiner # 79547

Room # 4B25 Phone 305-8319

Serial # 09/972,791

Format for Search Results (Circle One):

PAPER DISK EMAIL

Where have you searched so far?

USP DWPI EPO JPO ACM IBM TDB

IEEE INSPEC SPI Other _____

Is this a "Fast & Focused" Search Request? (Circle One) YES NO

A "Fast & Focused" Search is completed in 2-3 hours (maximum). The search must be on a very specific topic and meet certain criteria. The criteria are posted in EIC2100 and on the EIC2100 NPL Web Page at <http://ptoweb/patents/stic/stic-tc2100.htm>.

What is the topic, novelty, motivation, utility, or other specific details defining the desired focus of this search? Please include the concepts, synonyms, keywords, acronyms, definitions, strategies, and anything else that helps to describe the topic. Please attach a copy of the abstract, background, brief summary, pertinent claims and any citations of relevant art you have found.

split sum (current) prev 1 2 3 4

A Streamlined Data Viewing System (SDVS) that provides direct access to every data object while viewing any data object on a Visual Display Unit (VDU) via a client process, each data object resulting from searching an Information Location Mechanism (ILM), each data object having a plurality of data elements, each data element having some or no contents, the SDVS comprising:

An instruction port configured to receive a target identifier indicating the target data object;

A list port configured to receive a list of data object identifiers;

A data port configured to receive the target data object;

An output port configured to send the data object and a navigation control to the client process and/or to the mechanism that invoked the SDVS; and

A controller configured to:

Receive the target identifier from the instruction port,

Receive the list from the list port,

Receive the target data object from the data port,

Create a navigation control with one navigation element for each data object in the list, with the exception of the target data object, wherein the navigation control uses less display area than the display area than the display area occupied by the aggregate of the title of every data object in the list, and

Send the data object and the navigation control to the output port;

thereby saving a user time by enabling the user to access any data object that met their search criteria without returning each time to the result list that is typically displayed as the result of a search.

Voluntary Results Feedback Form

➤ I am an examiner in Workgroup: Example: 2133

➤ Relevant prior art **found**, search results used as follows:

- ☐ 102 rejection
- ☐ 103 rejection
- ☐ Cited as being of interest.
- ☐ Helped examiner better understand the invention.
- ☐ Helped examiner better understand the state of the art in their technology.

Types of relevant prior art found:

- ☐ Foreign Patent(s)
- ☐ Non-Patent Literature
(journal articles, conference proceedings, new product announcements etc.)

➤ Relevant prior art **not found**:

- ☐ Results verified the lack of relevant prior art (helped determine patentability).
- ☐ Results were not useful in determining patentability or understanding the invention.

Comments:

... Boolean searching. Using PLS search algorithms, Baton presents searchers with a relevancy-ranked group of **search results** rather than a date-ordered list. A relevancy graph in bright blue is your first **search result** . This shows a picture of how on-target your results were. After that, you can **view results** as headlines, in KWIC format, or as full-text documents. You can also ask Baton to analyze occurrences of **search** terms in the first 40 **hits** . If you choose KWIC, the next default is to **view** the first five **hits** . You can change the number or you can click on All Hits. What is missing is the opportunity to ask for the **next** five **hits** , after you've **viewed** the first five. You can ask for the first ten hits, but then you have...

Folio Views' interface is among the best
Marshall, Patrick
InfoWorld v15n36 PP: 85-88 Sep 6, 1993
ISSN: 0199-6649 JRNL CODE: IFW
WORD COUNT: 3367

...TEXT: Unlike file indexers, Views does not return a list of records with the numbers of **hits** in each. Instead, **Views** returns you to the entire infobase, with the first hits highlighted. The toolbar offers buttons for moving to the next or **previous hit**, and if you want to read surrounding records--regardless of whether they contain hits--you...

... through the entire infobase in order. Because Views always displays the entire infobase, you cannot **search** within a set of **search results** for a specified term.

Views' strong set of search tools would be even stronger if...

...information they are looking for on our site in a fraction of the time."

SurfMap Search visually represents search results , facilitating the search and navigation process for Web site visitors. Internet users simply conduct key word searches and results are immediately displayed and highlighted in the site map. By hovering the mouse over each search result , users can preview the contents of the page through a pop-up preview window, reducing...

...navigation is improved for visitors who no longer need to use the "Back" button-because search results are always visible on the site map, users simply click on the next hit in the site map to view the next search result .

"By visually representing search results , SurfMap Search expedites the

searching and navigation process for Internet users, leading them to the right information...

Views on the Web

FOLIO TAKES ADVANTAGE OF THE INTERNET WITH NEW DOCUMENT PUBLISHING SOFTWARE.

Byline: Todd Coopee

Journal: Network World Page Number: 55

Publication Date: November 27, 1995

Word Count: 2050 Line Count: 186

Text:

... start with a certain pattern of letters or all forms of the word. When a **search** has been completed, a **Results** Map window **displays** the number of **hits** generated. The **view** on Views We used Views to access and modify a number of existing infobases. In...

... was not only intuitive, but also remarkably fast. The Results Map was especially useful when **displaying hits** from compound searches. We next created new infobases with two additional packages. The \$895 Infobase...and wildcards. Display option fields allow you to tailor queries. Clicking on the Search button **displays** all of the **records** found that correspond to your query in the Results Map. Once a query has been evaluated, you can navigate through the results by clicking on the **previous hit** and **next hit** buttons, or selecting the **previous hit** and **next hit** hypertext links at the top and bottom of each page. Infobase Web Server also implements...
